

Mercury in Rubberized Gym Floors Requires Expert Monitoring - Contact NJASBO Associate Business Member, Dr. Richard Lynch, Ph.D., CIH for Assistance!

The NJ School Boards Association has recently reported that several school districts have **rubberized gym floors** which may **contain mercury**. Some landfills have refused to accept the demolition waste from these floors due to elevated mercury content.

This has prompted several school districts to **sample floors for mercury content and monitor air quality within the gyms for airborne mercury vapor**.

Management of Mercury in Gym Floors is Highly Complex
Air monitoring, risk communication and air quality management of mercury containing gym floors requires understanding of the toxicological, epidemiological, risk assessment and industrial hygiene scientific literature pertaining to mercury and human health.

If your district has mercury containing rubberized gym floors, **trust an experienced and highly qualified consultant with the scientific foundations to guide you through this complex issue.**

Contact Dr. Richard Lynch, Ph.D., CIH today for:

1. Rubberized Gym Floor Bulk Sampling
2. Air Monitoring & Sampling for Mercury
3. Mercury Risk Assessment and Exposure Management Plan
4. Specification Development for Safe Floor Removal
5. Mercury Risk Assessment & Communication to Stakeholders

As a Ph.D. in Public Health credentialed Certified Industrial Hygienist, **Dr. Lynch is uniquely qualified and experienced in Mercury and Indoor Air Quality Sampling and Risk Communication.** Dr. Lynch has worked with NJ School Officials on these issues, and is uniquely familiar with the particular challenges and exposure guidelines.

For more information on exposure guidelines, monitoring and risk management, contact Dr. [Richard M. Lynch, Ph.D., CIH](mailto:Richard.M.Lynch@esmcorp.com) today at 856-764-3557.

Stay Safe!
